BAS Tests

CONTEXT

This transportation company has over 500 employees and an IT budget around \$15 MM. The company partnered with Resilience to enhance visibility and empower leadership with data-driven insights and comprehensive reporting for more informed decision-making.

CHALLENGE

With a lean IT team and legacy technology, the company faced significant resource constraints. Adding to the complexity, they also had to navigate the cybersecurity policy and procedural requirements of their investors. They needed a solution that could provide detailed security control performance metrics and mitigation strategies to enhance visibility, streamline decision-making, and ensure compliance.

SOLUTION

The Breach Attack Simulations (BAS) powered by AttackIQ and available on the Resilience platform provided the company with real-world simulations of how well their servers, network, and endpoints can fend off attacks. These tests and insights were delivered easily through the Edge platform.

The tests were on-demand and agentless, enabling the organization to quickly emulate adversary behaviors without putting them at risk. The results helped give the company's board members and VC strong confidence in their ability to respond to modern cyber security attacks.

RESULTS

- The Edge solution delivered comprehensive security control performance metrics and actionable mitigation strategies, all through an intuitive, streamlined user experience.
- Due to the overwhelmingly positive results, the investors recommended that other companies within the portfolio to engage with Resilience, recognizing it as a trusted solution.
- The company instilled strong confidence in the organization's readiness to respond effectively to modern cybersecurity threats.
